EDUCATION

Bogaziçi University

BSc Computer Engineering, GPA: 4.0

Istanbul, Turkey

Aug. 2025 – Jun. 2029

EXPERIENCE

Co-founder & iOS App Developer

Okky Studio

Nov. 2025 – Present

Istanbul, Turkey

- Built reusable UI components with SwiftUI that decreased feature development time by 50%
- Automated 20% of unit testing through XCTest framework, reducing QA cycle time
- Integrated Firebase Analytics and Database for image storage; identified and fixed critical bugs that reduced crash rate from 2% to 1%

Educational Coach

Koşk Academy

Jun. 2025 - Present

- Taught and coached 30 students in mathematics and physics to prepare them for YKS (university entrance exam)

PROJECTS

Swypn AI Detector | Swift, Python, SwiftUI

2026 – Present

- A gamified AI image literacy iOS app published on the App Store, built with Swift and Python
- Led the full development lifecycle from SwiftUI implementation to App Store publication and maintenance
- Navigated Apple's Human Interface Guidelines (HIG) and strict privacy requirements (App Privacy Labels) for AI-integrated applications, ensuring a seamless review process

Reademy | Swift, Firebase, Python

Jan. 2026 - Apr. 2026

- A microlearning app with local AI voice models built with Firebase, Swift, and Python
- Optimized data synchronization by implementing efficient REST calls to Firestore
- Engineered a high-performance iOS client in Swift utilizing local AI voice models for offline text-to-speech capabilities to enhance user accessibility

Super Mario Bros. | Java, OOP, StdDraw

2026

- Built a 2D platformer with a physics engine, collision detection, portal teleportation, and enemy AI
- Designed a multi-class OOP architecture (6 classes) with clear separation of responsibilities: game loop, physics, map, player, enemy, and level management

Japanese Programming Language (JPL) | Compiler Design

2025

- Built a two-stage compilation system to process a custom programming language (JPL)
- Created a binary generator that translates source code into optimized object files
- Developed an execution engine to simulate hardware-level processing of binary instructions, outputting results with 100% accuracy across test suites

LEADERSHIP & AWARDS

Girls in Science – STEM Project

Aydın Doğan Foundation

Jul. 2025 – Apr. 2026

Van, Turkey

- Led a science and technology social project to encourage underprivileged secondary school girls in remote villages in Turkey
- Taught step-by-step methods of building robots using Arduino boards and sensors
- Promoted technological knowledge among girls in male-dominated fields

DiscoverEU Erasmus+ Project

European Union

Jun. 2025 – Jul. 2026

- Traveled and explored European culture for educational purposes, sponsored by the EU

TECHNICAL SKILLS & HONORS

Skills: Python, Java, Xcode, SwiftUI, Firebase

Honors: Graduated 3rd in class from Capa Science High School, ranked 1st in robotics competition at Balıkesir Techno-Entrepreneurship Summit
